FileMaker to Clip Manager
Get the current FileMaker Clipboard information into Clip Manager

Clip Manager to FileMaker
Send the current clip (selected from the File Browser or from the Clip History) to the FileMaker Clipboard

Save clip…
Save the current clip information to a file in one of your clips folders

Clip History Filter
Provides extensive filtering options for the Clip History More filter criteria are displayed when performing a search

Navigation
Navigate forward and back between recently loaded clips

Clip Information
Shows detailed information about a clip's contents

Clips Browser
Store saved clips into folders and subfolders

Clip History
Allows you to store all information you copy in FileMaker, i.e. all scripts, script steps, fields, tables and layout elements. Smart folders make it easy to find what you are looking for.

File Browser
Shows a listing of clips in the selected folder, or a list in the Clip History. A clip is loaded in the contents window by double-clicking (or using the cmd-down arrow shortcut)

Clip Comments
Add your own comments to the current clip (either loaded from the FileMaker clipboard, from the File Browser or from the Clip History

Metadata information
Provides additional data about the clip, such as clip type, timestamp, author, active window name, etc.

Layout preview
If a layout element is selected, you can optionally see a preview of the object(s)

Clip Contents
Displays the XML contents of the current clip (with optional syntax coloring). Can be edited using Find/Replace or using an external editor

Status Bar
Displays error information about the XML contents
